### DETAILED ACTION

1. The Group and/or Art Unit location of your application in the PTO has changed. To aid in correlating any papers for this application, all further correspondence regarding this application should be directed to **Group Art Unit 1648**. **Your application has been reassigned to examiner Stacy Brown.**

### *Election/Restrictions*

2. Restriction to one of the following inventions is required under 35 U.S.C. 121:
- I. Claims 1-23, drawn to a method of generating a mucosal immune response, classified in class 514, subclass 44.
  - II. Claims 24-29, drawn to a particulate vaccine composition, classified in class 424, subclass 184.1.
  - III. Claims 30-35, drawn to a method for treating or preventing a disease, classified in class 514, subclass 44.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the product as claimed can be used in a materially different process of using such as treating or preventing a disease.

Inventions I and III are drawn to different methods that have different method steps and outcomes. Invention I is a method of generating an immune response while invention II is a method of treating or preventing a disease. The search for these inventions is not co-extensive because Invention II encompasses treating and preventing disease, which involves more factors than inducing an immune response.

Inventions II and III are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the product as claimed can be used in a materially different process such as in a method of generating an immune response.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, and the literature search for Group I is not required and not co-extensive for Groups II and III, restriction for examination purposes as indicated is proper.

A telephone call was made to Thomas McCracken on 12 June 2001 to request an oral election to the above restriction requirement, but did not result in an election being made. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the

Art Unit: 1648

application. Any amendment of inventorship must be accompanied by a petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

***Conclusion***

3. Papers relating to this application may be submitted to Group 1600 by facsimile transmission. Papers should be faxed to Group 1600 located in Crystal Mall 1.
